National Accounts, Income and Expenditure, 1938-1946.

Dominion Statistician:

Herbert Marshall

Chief, Central Research and Development Staff:

C. M. Isbister

Chief, National Income Unit:

A. S. Abell

Gross national product and gross national expenditure in 1946 were at a level of \$11,129 million in comparison with \$11,478 million in 1945. The 1946 estimates are preliminary as are the 1945 estimates but the latter have been revised since their first publication. The moderate decline in the money totals is larger in real terms as is indicated by the rise of 4.8 per cent in the index of wholesale prices and 3.4 per cent in the cost of living index from 1945 to 1946.

Net national income in 1946 was \$9,212 million as compared with \$9,587 million in 1945. Civilian salaries and wages increased by \$247 million while military pay and allowances decreased by \$817 million. The main components of investment income were maintained at their 1945 levels. The decline of \$140 million in total investment income is accounted for by two items, a decline in government trading profits and an increase in dividends paid abroad. Agriculture and other individual enterprise showed proportionate gains.

While the national income declined in 1946 personal income increased by \$358 million. This is largely due to the increase in transfer payments by government to individuals. The large increase in transfer payments includes the increase in family allowances and the large scale payment to veterans in 1946 of war service gratuities, re-establishment credits and pensions.

Components of gross national expenditure reflect a significant diminution of government expenditures offset in large part by increases of consumer expenditure and investment in plant, equipment and inventory. Receipts from abroad were maintained at a high level because of the continuing foreign demands for commodity exports backed up by Canadian government loans.

This bulletin continues the series which were presented and described in "National Accounts, Income and Expenditure, 1938-1945". The presentation of gross national expenditure has been changed in two respects. In the first place, foreign investment by governments has been excluded from government expenditure on goods and services and the balance of foreign investment which was formerly carried under "net private investment abroad" has been eliminated from the table. This has made it possible to include the effect of international transactions by adding current receipts from abroad (exclusive of Mutual Aid, Military Relief and UNRRA) and deducting current expenditures abroad. The other change in presentation results from shifting the Wheat Board inventory from government non-war expenditure to gross investment at home.

The estimates will be subject to revision when fuller information becomes available.
